Athlete application

§11 field capture · §21 AthleteState · §4 guardian path

The loop starts here. An application that never reaches ACTIVE is the cheapest failure in the system — everything downstream assumes an approved athlete with a rate.

Review and approval

§21 AthleteState · §37 pre-pilot gate

A minor cannot reach ACTIVE until a verified guardian is recorded — **verifiedAt** set, not merely a guardian named. CHANGES_REQUESTED returns the athlete to page 2.

NIL job and rate card

§5 pay and price bands · §6 tier multipliers · §14 score

The sell-floor check is not decoration. **P0-PMO-09 found athlete cost exceeding the sell floor on all seven jobs** at the top of the base band with a Premium athlete. Until that pricing decision is taken, this gate fires in real cases.

Sponsor brief

§13 steps 1–2 · §21 BriefState

Phase 1 is a **managed** marketplace: qualification and approval are BTG staff actions. There is no self-service checkout — that is Phase 2. Zoho is written to through the queue, never on the request path.

Matching and invitation

§13 steps 3–5 · §26 conflict checks · §21 InviteState

The §26 conflict check needs the athlete's **restricted categories**, which are not yet modelled — see the ERD coverage audit. Expiry is a worker sweep of **expiresAt**, not a check performed on read.

Campaign Order

§12 agreement workflow · §13 steps 6–7 · §21 OrderState

Acceptance writes a hash of the exact text shown. **Any acceptance captured against draft wording is void and must be re-issued once counsel signs off** — a launch condition, not a coding one. Compensation and usage rights are snapshotted onto the order.

Deliverable

§13 steps 8–9 · §21 DeliverableState

Two review stages, and sponsor review only when the order requires it. Uploads go direct to R2 by presigned URL, never through the app server. The two “changes requested” arrows are derived — §21 states the forward path only.

Tracking and the fan reward

§16 QR / reward workflow

Scan, landing, claim and redemption are **four separate events**. The CLAIM is the consent record, not a metric that happens to carry an email. REDEEM is enforced once-forever by a partial unique index. **Only REDEEM is a business outcome** — presenting SCAN as a result is overselling.

Metrics and earnings

§13 steps 10–11 · §21 EarningState · Payment Policy G-01

Phase 1 measurement is largely verified-manual or self-reported, so every figure carries a provenance label. **PAID is a bookkeeping mark about something that already happened elsewhere, never an instruction to move money** — no bank details, no tax IDs.

Sponsor report and renewal

§12 report · §13 step 12 · §21 CampaignState

The report is the document that earns the renewal, and the renewal signer often never logs in — which is why a file is required, not just a screen. A renewal re-enters the loop at page 5.
